## DETAILED ACTION

### *Title*

1. The title of the invention is not descriptive. A new title is required that is clearly indicative of the invention to which the claims are directed.

### ***Claim Rejections - 35 USC § 102***

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.

The changes made to 35 U.S.C. 102(e) by the American Inventors Protection Act of 1999 (AIPA) do not apply to the examination of this application as the application being examined was not (1) filed on or after November 29, 2000, or (2) voluntarily published under 35 U.S.C. 122(b). Therefore, this application is examined under 35 U.S.C. 102(e) prior to the amendment by the AIPA (pre-AIPA 35 U.S.C. 102(e)).

3. Claims 1-7 are rejected under 35 U.S.C. 102(e) as being anticipated by Kimura et al. (U.S Patent 6,108,716)

Kimura discloses an electronic apparatus detachably connected to an input device, comprising:

- a main unit (fig.13, 100)
- a display unit rotatably attached to the main unit (col.2, lines 62-67)

- a retaining mechanism retaining the input device between the display unit and the main unit (col.6, lines 28-30)
- retaining mechanism comprises at least one supporting member (col.2, lines 16-17)
- the supporting member is mounted so as to be storable in the main unit when the input device is not being stored (col.2, lines 43-50)
- the retaining mechanism comprises an engaging member engaging the main unit and the input device (col.2, lines 5-10), (col.8, lines 25-38)
- the engaging member is mounted so as to be storable in the main unit when the input device is not being stored (col.25-33)
- at least one detector (fig.15, 105) detecting each of a storage and a removal operation of the input device (col.10, lines 24-30)
- Control means controlling a predetermined operation of the electronic apparatus according to a signal of the detector (col.22, lines 18-27), (col.10, lines 24-42), (col.12, lines 53-65)
- an input device detachably connected to an electronic apparatus, the electronic apparatus comprising a main unit and a display unit rotatably attached to the main unit, the input device comprising:
  - at least one engaging member engaging the main unit so that the input device is retained between the display unit and the main unit. (col.2, lines 5-17)
